

Preface	ix	3 Dynamics	81
1 Overview of Robotic Mechanisms and Controller	1	3.1 Lagrangian and Newton-Euler Formulations	81
1.1 Mechanisms	1	3.2 Some Basics of Kinematics	82
1.2 Controller	9	3.2.1 Newton's Equation and Euler's Equation	82
Exercises	11	3.2.2 Lagrange's Equation	86
References	12	3.3 Derivation of Dynamics Equations Based on Lagrangian Formulation	88
2 Kinematics	13	3.3.1 Two-Link Manipulator	88
2.1 Position and Orientation of Objects	13	3.3.2 n -Link Manipulator	91
2.1.1 Object Coordinate Frame	13	3.3.3 Parallel-Drive Two-Link Manipulator	98
2.1.2 Rotation Matrix	14	3.4 Derivation of Dynamic Equations Based on Newton-Euler Formulation	100
2.1.3 Euler Angles	18	3.4.1 Basic Procedure of Newton-Euler Formulation	100
2.1.4 Roll, Pitch, and Yaw Angles	22	3.4.2 Link Accelerations of a Manipulator	102
2.2 Coordinate Transformation	23	3.4.3 n -Link Manipulator	103
2.2.1 Homogeneous Transform	23	3.5 Use of Dynamics Equations and Computational Load	108
2.2.2 Product and Inverse of Homogeneous Transform	26	3.5.1 Real-Time Control—Inverse Dynamics Problem	108
2.3 Joint Variables and Position of End Effector	28	3.5.2 Simulation—Direct Dynamics Problem	110
2.3.1 General Relation	28	3.6 Identification of Manipulator Dynamics	112
2.3.2 Link Parameters	31	3.6.1 Identification Problem of Manipulators	112
2.3.3 Link Frames	33	3.6.2 Identification Scheme Based on Lagrangian Formulation	113
2.3.4 Solution to Direct Kinematics Problem	39	3.6.3 Identification of Load	122
2.4 Inverse Kinematics Problem	45	Exercises	123
2.5 Jacobian Matrix	53	References	125
2.5.1 Translational and Rotational Velocity of Objects	53	4 Manipulability	127
2.5.2 Definition of the Jacobian Matrix	57	4.1 Manipulability Ellipsoid and Manipulability Measure	127
2.5.3 Link Velocities of a Manipulator	60	4.2 Best Configurations of Robotic Mechanisms from Manipulability Viewpoint	133
2.5.4 General Expression of the Jacobian Matrix J_v	63	4.2.1 Two-Link Mechanism	133
2.5.5 Joint Velocity for Achieving Desired End-Effector Velocity	66	4.2.2 SCARA-Type Robot Manipulator	135
2.5.6 Singular Configurations	67	4.2.3 PUMA-Type Robot Manipulator	137
2.6 Statics and Jacobian Matrices	71	4.2.4 Orthogonal-, Cylindrical-, and Polar-Coordinate Manipulators	139
2.6.1 Equivalent Forces Represented in Different Frames	71	4.2.5 Four-Joint Robotic Finger	139
2.6.2 Joint Driving Force Equivalent to Force Applied to Tip of Manipulator	74	4.3 Various Indices of Manipulability	142
Exercises	76		
References	80		

4.4	Dynamic Manipulability	143	6.2	Hybrid Control	222
4.4.1	Dynamic-Manipulability Ellipsoid and Dynamic-Manipulability Measure	143	6.2.1	Hybrid Control via Feedback Compensation	222
4.4.2	Two-Link Mechanism	148	6.2.2	Dynamic Hybrid Control	227
	Exercises	153		Exercises	240
	References	153		References	242
5	Position Control	155	7	Control of Redundant Manipulators	244
5.1	Generating a Desired Trajectory	155	7.1	Redundant Manipulators	244
5.1.1	Joint-Variable Scheme	155	7.2	Task-Decomposition Approach	245
5.1.2	Scheme for Position Variables of End Effector	161	7.2.1	Decomposing a Task into Subtasks with Priority Order	245
5.2	Linear Feedback Control	166	7.2.2	Basic Equations	245
5.2.1	Effectiveness of Linear Feedback Control	166	7.2.3	Second Subtask Given by Desired Trajectory	247
5.2.2	Stability of Proportional and Differential Feedback Control	168	7.2.4	Second Subtask Given by Criterion Function	248
5.3	Two-Stage Control by Linearization and Servo Compensation	170	7.2.5	Formulation as Instantaneous Optimization Problem	249
5.3.1	Basic Concept of Two-Stage Control	170	7.3	Application to Avoiding Obstacles and Singularities	249
5.3.2	Structure of Control System	175	7.3.1	Avoiding Obstacles	249
5.3.3	Parallel Processing Scheme	176	7.3.2	Avoiding Singularities	253
5.4	Design and Evaluation of Servo Compensation	182	7.4	Computational Method for Desired Joint Velocity	256
5.4.1	Linear Servosystem Theory	182		Exercises	257
5.4.2	Stability Margin and Sensitivity	187		References	258
5.5	Decoupling Control	192	Appendix 1	Function atan2	259
5.5.1	Theory of Decoupling Control for Nonlinear Systems	192	Appendix 2	Pseudo-Inverses	263
5.5.2	Application to Manipulators	196	Appendix 3	Singular-Value Decomposition	268
5.5.3	Consideration of Actuator Dynamics	197	Appendix 4	Lyapunov Stability Theory	272
5.6	Adaptive Control	199		Solutions to Selected Exercises	277
	Exercises	207		Index	283
